American eel

Physical Characteristics

Area - 25 acres

Maximum depth - 22 feet

Temperatures:

Surface - 72⁰F
20 feet - 60⁰F

Principal fisheries: Smallmouth bass, largemouth bass

Hopkins Pond is a small pond formed on the outlet of Minnihonk Lake, merely a wide spot in the stream. Although an occasional brook trout is caught, a result of the Minnihonk Lake stocking, Hopkins Pond should be managed for the warmwater species. White perch have been reportedly been caught but have not been confirmed.

The Department of Inland Fisheries and Wildlife purchased the area at the dam site on Taylor Mill Pond located just down stream of Hopkins Pond. This now provides access to both ponds.

Surveyed - August, 1953

Revised - 2001
